TITLE: Method for obtaining cation exchange resin from waste solutions of the sulfite cellulose industry. Class 39, No. 173952

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 16, 1965, 85

TOPIC TAGS: cation exchange, resin, sulfite waste liquor, cellulose

ABSTRACT: This Author Certificate presents a method for obtaining cation exchange resin from waste liquor of the sulfite cellulose industry (alcoholic sulfite, malt, and yeast brew). To reduce the cost of manufacture, the waste malt solutions are freed from the base by cationation and concentrated by evaporation at a temperature of 90-100C until the dry materials content reaches 50%. The mixture is heated to dryness and condensed at the same temperature until the resin gains the desired degree of swelling.

Title : Chronicles. Coordination conference on problems of the automatization and telemechanization of irrigational systems and on theoretical problematics in the field of telemechanics

Periodical : Avton. 1 telem. 16, Jul-Aug 1955, 402-403

Abstract : One of the essential conditions for the further development of agriculture in irrigated regions is the improvement of the operation of irrigational systems by way of equipping them with modern technical means of automatics and telemechanics. The first All-Union Conference on the Automatization and Telemechanization of Irrigational Systems, which was held September 1953 in Tashkent, pointed to the completely insufficient work of scientific research institutions in this field, and therefore conferred the general coordination of works on this problem on the Institute of Automatics and Telemechanics. The second Conference, held April 1955 in Tbilisi by the Institute of Automatics and Telemechanics and by the Power Engineering Institute of the Academy of Sciences Georgian SSR, was participated in by the Ministry of Agriculture USSR, Ministry of Water Economy RSFSR, Institute of Machine Science and Automatics of Academy of Sciences Ukrainian SSR, Power Engineering Institute of Academy of Sciences Uzbek SSR, Central Asia Sci-Res Institute of Irrigation,

The next coordination conference in 1956, to be held in Tashkent, will judge the results of experimental verifications of apparatuses and plan tasks in automatics and telemechanics of a complex nature.

ABSTRACT: The general contents of cybernetics is considered. Elementary description is presented of some parts of an electron computer: electron trigger-cell adders, magnetic-tape memory, etc. A simplified diagram of computer operation is given and also some information about the program and the instructions. An example of three-digit addition in a single-address computer is examined. Four illustrations.

PURPOSE: This collection of articles is intended for scientists and technical personnel concerned with electronics in general, and machine translations in particular.

COVERAGE: Four out of the nine articles concern machine translation from Georgian into Russian, and vice-versa. Two articles consider general problems of machine translation. The three remaining articles discuss various electronic devices. Articles 1, 3, and 4 are written in Georgian with summaries in Russian. The

TITLE: Pulse generator for investigating GIFF-1 ferrite characteristics

CITED SOURCE: Tr. Tbilissk. n.-i. in-ta priborostr. i sredstv avtomatiz., v. 4-5, 1964, 163-175

TOPIC TAGS: pulse generator, ferrite test

TRANSLATION: The circuit and design of a laboratory pulse generator used for investigating storage-type ferromagnetic cores are described. This generator permits determining the effect of the height, number, and duration of destructive pulses on the readout-signal e_s and noise e_n voltages, the signal-to-noise ratio e_s/e_n under selected conditions, and also the quadratic coefficient which characterizes the ability of the recorded information to withstand destructive pulses. The generator comprises two principal assemblies: a programing unit and a power amplifier. The programing unit designed with standard elements (blocking oscillator, single-shot multivibrator, and gate) produces a series of square current pulses whose height and duration depend on the requirements of the core testing. These pulses are amplified by a wideband power amplifier and are applied to the test core; the latter's

AUTHOR: Eliava, A.Kh. and Adamovich, A.V., Candidate of Technical Sciences

TITLE: An Improved Design of Oil Control Piston Rings (Uluchsheniye konstruktsii maslos"emnykh porshnevykh kolets)

PERIODICAL: Avtomobil'naya promyshlennost', 1959, Nr 2, pp 10-11 (USSR)

ABSTRACT: The authors describe the new design of oil-control piston rings for "ZIL" engines. Tests conducted by NAMI in the Moscow bus depots revealed that increased oil consumption in "ZIL-124" engines is caused by carbon deposits in the slots of standard oil-control piston rings. These slots were enlarged from the standard size of 1 mm to 1.5-1.75 mm, thus decreasing the oil consumption by 60-70% and increasing the running time between general overhauls by 50%, e.g. from a previous average mileage of 11,400 km to 20,100 km. Similar results were obtained by NATI with tractor engines. There are 2 tables, 1 photo, 1 diagram, and 1 Soviet reference.

TITLE: Cyclic polymerization and copolymerization studies. 12. Radical polymerization of branched trivinyl compounds

SOURCE: Vy*sokomolekulyarny*ye soyedineniya, v. 5, no. 5, 1963, 777-782

TOPIC TAGS: cyclic polymerization, copolymerization, radical polymerization, trivinyl compounds, cyclization, triallylmethane

ABSTRACT: Radical polymerization of trivinylorthoformate, trivinylphosphate and triallylamine hydrobromide was conducted in glass ampules at 80C, in the presence of benzoyl peroxide and azobisisobutyronitrile. The obtained polymers varied as to softening temperature, solubility in various solvents, and the degree of residual unsaturation, the latter amounting to 3.6 to 5.5%. On the basis of chemical and infrared spectroscopic investigation the conclusion was reached that intramolecular cyclization occurs on polymerization and that the three double bonds of the monomers are involved, forming polymers with bridged bicyclic repeating units. In another series of similar experiments using triallylacetonitrile, triallylacetamide, tri-allylcarbinol and triallylcarbinol acetate, it was found that the maximum polymer yield on block polymerization amounted to only 20%, as against 46% in the first

Cord 1/2

L 13337-63

ACCESSION NR: AP3000707

series, and that the residual degree of unsaturation amounted to 22% of the original monomers. It was concluded that this polymerization does not involve complete cyclization, the likely pattern consisting in the cyclization of two monomer molecules and in a double cyclization of one. Orig. art. has: 4 formulas and 2 tables.
